Student Team Weekly Report – One Page Template (To be Submitted every Thursday 10.00PM)

PROJECT / FEATURE

Campus Canteen Management System

Authentication, User Roles, Menu Management & Order Pipeline

TEAM & MENTOR

Team ID:

Faculty Mentor: Rudragouda Patil

WEEK TEAM / LEADER

Week Ending: August 8, 2026

Student Name (Lead): Nidhi Yadav

WORK COMPLETED

- **Authentication & Security:** Login/registration with `@mmcoe.edu.in` restriction and RBAC.
- **Database & Security:** MySQL 8.0 schema for 8 roles; credentials secured via `.gitignore`.
- **Menu Catalogue:** Live menu with category filters, search, and out-of-stock status.
- **Order Processing:** Transactional orders, automatic stock deduction, and order tracking.
- **Dashboards:** Role-based Student, Manager & Staff dashboards with kitchen queue and POS billing.

CHALLENGES / RISKS

- GREEN — MySQL port 3307 access denied. Impact: registration blocked. Resolved with isolated db.properties credential loading.
- GREEN — MySQL JDBC driver ClassNotFoundException on Tomcat 10. Resolved by adding the connector JAR to Tomcat/project libraries.
- GREEN — CORS blocked requests from Live Server :5500 to Tomcat :8080. Resolved with setCorsHeaders() and doOptions().
- AMBER — OrderServlet multi-table transactions may face stock race conditions under concurrency. Transaction rollback logic is in progress.

HELP NEEDED

Precise question:

Should Module 2 use Tomcat JNDI Connection Pooling (HikariCP / DataSource) or the current JDBC connection approach for load testing?

INTEGRATION AND COLLABORATION

- Interfaces: REST/JSON Servlets — /canteen/login, /register, /dish and /order — with MySQL 8.0 JDBC.
- Standardized JSON request/response contracts across Auth & Roles, Menu Catalogue and Order Queue work.
- Authored TEAM_INTEGRATION_GUIDE.txt and resolved open Git integration dependencies.
- Learned Tomcat WEB-INF/classes and WEB-INF/lib structure, CORS handling and branch-merge workflow.

COMMON KPI EVIDENCES

- Performance: local Java Servlet + MySQL operations achieved sub-50 ms API response time.
- Continuous Integration: clean commit history (011382d) with zero merge conflicts.
- Security: database credentials protected through .gitignore and external db.properties.
- Collaboration & Leadership: standardized integration specifications and task distribution across the team.

NEXT WEEK COMMITMENTS

member 1— Audit trail logging API + user profile modification handlers in UserServlet.java — Due Aug 13, 2026.

member 2. — Real-time stock decrementing + inventory reorder alerts in DishServlet.java — Due Aug 13, 2026.

.member 3 — Kitchen & Delivery real-time order-status state machine in OrderServlet.java — Due Aug 13, 2026.

MENTOR RESPONSE

Decision / Guidance / Owner / Target Date

To be filled by Faculty Mentor during evaluation.

Note: Leader Submits; all four members view and actions, confirm accuracy before submission
